

Rukas Skirkevicius

Game Developer

rukas.skirkevicius@gmail.com | +370 629 81722

[Linkedin](#) | [GitHub](#) | [Portfolio](#) | [Assetstore](#) | [Artstation](#)

Indie game developer with 8+ years specializing in Unity systems architecture, tools development, and 3D graphics, with additional fullstack experience in TypeScript, backend systems, and web security.

Selected Projects

Forsaken Dawn 2025-Present

Unity, C#, Blender, Substance 3D Painter, URP, Rider

Learn more: <https://game.rukas.dev/projects/forsaken-dawn>

An upcoming open-world survival horror game set in a nuclear winter apocalypse with sci-fi elements. Built entirely solo, covering all technical and artistic responsibilities

- **Gameplay Systems:** Implemented a wide range of systems including player mechanics, interaction and placement, inventory and gear management, crafting, construction, day/night cycle, temperature, afflictions and status effects.
- **Architecture & Tools:** Created data-driven item architecture, MVC UI system using Unity UIToolkit, flexible equippable system, data persistence, FSM AI, localization, and custom input system.
- **3D Art & Level Design:** Full ownership of 3D asset creation using Blender, and texturing using Substance 3D Painter and Affinity Photo.
- **In Progress:** Weather system, modular world streaming via Addressables, GOAP AI for complex behaviours, improved weapons system, and playable environment.

Pixel Harmony 2023-Present

Unity, C#, UIToolkit, HLSL

Published Unity Editor tool | [Asset Store](#)

A full-featured image editor built inside the Unity Editor, compatible with all rendering pipelines.

- **Features:** Layer-based workflow with blending modes, brush-based painting, pixel art support, PBR texture authoring, image filters and adjustments, and a powerful custom brush engine.
- **Commerce:** Independently published, managed, and maintained on the Unity Asset Store with 100+ in sales. Handling full product lifecycle from development to deployment.

Secure Dashboard 2026

TypeScript, Postgres, Prisma, Redis, Express, BullMq, React, Tailwind

Live link: <https://secure-dashboard.rukas.dev>

Render, Vercel, Upstash, Redis Cloud, Neon, Cloudflare

- **Auth & Security:** Credential login, OAuth 2.0 (Google, GitHub), TOTP-based MFA with backup codes, and sudo re-authentication for sensitive actions.
- **Token & Session Management:** JWT access control with refresh-token rotation using revocable token families, Redis session blacklist, selective session revocation.
- **Security Controls:** Stateless double-submit CSRF protection, CAPTCHA, rate limiting, RFC-9457 error handling, and encrypted verification payloads.

Skills

Programming Languages:

C#, Java, TypeScript, HLSL

Game Development:

Gameplay Systems, AI, Tools, Animations, Optimization, Profiling, UI/UX

Unity / Engine Technologies:

Entities (ECS), Jobs, Burst, Render Pipelines, UIToolkit, uGUI

Graphics:

Modeling, Texturing, Mesh Baking, Trim Sheets, Texture Atlases, LOD

Tools & Software:

Unity, Godot, Blender, Affinity Photo, Substance 3D Painter, Git, .NET

Libraries & Frameworks:

UniTask, ZLinq, Zenject, R3, Odin

Platforms

PC, Android, iOS, AR, VR

Experience

Independent Developer | Freelance

Remote | 2024- Present

- **Game Development:** Sole developer on a commercial-scale open-world survival game, owning all technical, artistic, and design responsibilities.
- **Digital Commerce:** Designed and published proprietary software tools and 3D assets across online marketplaces including the Unity Asset Store, managing the full product lifecycle from development to deployment.

Tech stack: Unity, C#, Blender

Pelicaad | Fullstack Engineer

Remote | 2022 - 2024

- **Navigation System:** Developed an Android application from the ground up, utilizing Google Cloud AR Anchors to engineer a precise GPS-based navigation system.
- **Backend Systems:** Built and maintained backend infrastructure, implemented secure user authentication, as well as, a real-time commenting system.
- **Android Application:** Developed a location-based Android instant app enabling users to scan public QR codes and access location-specific content, implementing geolocation APIs and backend integration while meeting Google Play's strict instant app constraints (sub-15MB APK).
- **3D Visualization:** Developed a high-performance web-based 3D visualization platform using Mapbox, enabling users to render geospatial data, place 3D anchors, and define bounding boxes within an AR space.

Tech stack: Unity, C#, Blender, Typescript, Node, Android Studio, Java

Studio X | Software Engineer intern

Rijssen, Netherlands | 2019 - 2020

- **Software Architecture:** Developed a comprehensive Unity application from scratch, featuring a custom 3D rendering viewer to visualize glTF models via external API integration.
- **Cloud Infrastructure:** Managed cloud infrastructure using Azure, ensuring efficient storage and retrieval of complex 3D assets.
- **AR Deployment:** Delivered a cross-platform AR mobile application (iOS/ Android) for a client product launch, handling the complete software development lifecycle (SDLC) from initial development to launch.
- **Technical Visualization:** Developed complex interactive animation sequences, resulting in the application being utilized as the primary showcase tool during an official industry product conference.

Tech stack: Unity, C#, Azure, TypeScript

Education

Saxion University of Applied Sciences

Enschede, Netherlands

Bachelor's Degree, Creative Media

2017-2021
